Search #995 Exploitation Engineer

The Organization

Our client is a Calgary-based public oil and gas company, with conventional and thermal core areas. The Management Team have been involved in the development of low decline assets focused in Saskatchewan and Alberta. Their primary growth has been through analysis, engineering, expansion of existing production, development and operations. In addition, they will make accretive strategic acquisitions as they arise or generated internally. Their culture is of continual improvement along with adherence to best safety practices.

Why Consider This Role?

- This is an excellent opportunity to work for a growing, entrepreneurial, public, dividend – paying Canadian owned company.
- You are a driver and you receive recognition for your effort and results.
- You want personal visibility and accountability that comes with working for a midsize company.

Team Dynamics

You will report to the Vice President, operate in a team setting supported by production, facilities, geology and field operations staff.

Responsibilities:

Your key areas are;

- Production/Capital Delivery
- Drilling Plan/Execution
- Waterflood Optimization
- Reserves & Inventory development
- Absorb input to generate plans for growth

Job description is provided if qualified interest is shown.

Qualifications:

10+/- years in engineering in a combination of exploitation, reservoir and production with conventional oil assets. Field experience is highly regarded in Alberta or Saskatchewan. “Self-starter” is a word commonly used to describe you, with a collaborative work style. You have been recognized for resolving issues as they arise. Strong interpersonal and organizational skills easily draws input from field and office staff. Software tools include MS Office, Accumap, Value Navigator, Whitson+, Tableau/PowerBi/Spotfire, Well Test, ProdView, PetroSight . Knowledge of AER, rules, practices and applications.
